Astronacci International

On this edition of Moneta Monthly, we get a chance to delve in the minds of Mr. Gema Goeyardi, MM, CAT, CFTe, MFTA, CWM, CSA, CTA, CFI, CFII, MEII, IGI, a familiar name in the world of trading. With that long title name, we know he is truly an expert. President and founder of PT. Astronacci International, he dedicated his life to be an investor, broker, analyst, and professional instructor. Featured in FORBES and FORTUNE magazine, have records on his name from MURI (Indonesia's Museum of Records), won numerous awards, more than a dozen professional certificates. He is also an accomplished flight instructor with numerous licenses from the Federal Aviation Administration.

Without further a due, let's begin our talk.

Moneta Monthly : When was the first time you were exposed to professional stocks/forex trading?

Gema Goeyardi : I was exposed to professional stocks/forex trading industry in 2009 when I found Astronacci. Astronacci is one of Asia's leading capital market research & trading services company that I founded in 2009. We are the only one who provides time forecast analysis, and we have the sharpest analysis method you will ever see in this century.

MM : How did you learn to trade stocks and forex?

GG : After graduating from college I've been thinking about owning my own business and starting to raise some start-up capital. With that thoughts in my mind, October 4th, 2007 was the first time I entered the capital market. But in 2008, there was a major world crisis of subprime mortgages in the United

A-CLUB Academy

And this caused huge losses on the world capital market and Indonesia was also destroyed. I had a huge loss in the stock market. At that time, I tried to run to the futures market and started trading forex to get my money back. But instead, I had lost more than before, with a total loss \$150,000.

Having been stressed and traumatized due to heavy losses, I decided to take a 2-year break until finally I returned to trading in stocks and forex. Even after discovering the Astronacci method, I haven't fully recovered mentally from the trauma of the losses in 2008. Slowly I started trading again even though I was still getting small losses and not getting a big profit yet. Until finally I managed to get consistent profits both in the stock market and futures, after I changed my mindset and started building my mentality to be more stable while in the market.

MM : What made you want to become a professional trainer and instructor?

GG : I want to introduce the financial markets to the millennials. So that they can be more literate about investing for the future.

I also want to introduce the Astronacci method that I have developed since 2009 to all traders. Because with the Astronacci method, traders will find it easier to time the market with Astrology Cycle which can give an exact date of a price turning point. Also, they will have an accurate analysis method to find the price direction. Of course, this will really help traders to get profit on the market consistently.

MM : Can you tell our readers about Astronacci and what/who was your inspiration for this concept?

GG : When there was a big loss in the stock market in 2008, I took inspiration from that failure and realized that I "got into the market wrong time".

Price movements in that market move in a repetitive pattern. In technical analysis, it is explained that the price moves in a pattern. And this price pattern can be identified using methods such as Fibonacci. While the astrological cycle is related to human behaviours and this affects the mood of the market that occurs. From these two knowledges, I managed to find a method that can accurately read price movements, even to "what date" and at "what price" the stock can go up in the market.

MM : You have "A-CLUB Academy" and "CAT Institute", tell us more about that and who it is meant for?

GG : A-CLUB Academy is a trading community that provides convenience and helps traders in trading. At A-CLUB, traders can get trading signals with an accuracy level of above 75% -80% to get profit. In addition, A-CLUB also provides education for traders in the form of e-learning which can be accessed through the website and trading education such as analysis taught through live webinars by the researcher team from Astronacci. And of course, I also sometimes guide traders who are already members directly.

CAT Institute is a trading school to get the Chartered Astronacci Trader (CAT) certification in 12 months. For people who are unfamiliar with trading but want to learn, as well as newbie traders who want to become professional traders and can make consistent profits, can join this CAT program. Here traders will be taught starting from the basics of trading, techniques to analyse price movements in the market, and of course will learn the financial astrology and time forecast method. What makes this CAT Institute special is that you can only learn the Astronacci

CAT Institute

Trading Tips

MM : What sets your training apart from other training techniques currently available?

GG : What makes Astronacci's method different from other methods. Because the Astronacci method is an analytical method that combines financial astrology and Fibonacci to find a pattern of future price movements and dates of price ups and downs before they occur.

Astronacci increases your trading profits because it has an accuracy rate of up to 75%. The Astronacci method makes "time" the strongest element that must be considered and known in determining price movements in the market.

MM : What do you think about the upcoming US Election 2020? How will it impact the market from your point of view?

GG : Based on the cycle of US President Election, I believe the Republic will lead for one more round and Trump has a bigger chance to win. The USA market signals a big support to the Republic and after the election the Dow Jones will be moving in a bullish trend for 3 weeks, according to the 10 years Dow Jones behaviour.

The Covid 19 will more than likely ended in 2022.

MM : For the newcomers in stocks & forex trading, do you have any advice for them, especially now in the pandemic era?

GG : Learn how the market really works, start from the study of trend analysis. There are 3 pillars the MINDSET, METHOD, and MONEY MANAGEMENT. These are the most important part to master

MM : Where will you go from here? What are your dreams that you have not accomplished, yet? If we may, what will be your legacy to your community?

GG : In 2021, we are going abroad for Astronacci financial advisory and trading business start from Malaysia, Singapore, and USA. We are active in North America through Astronacci International, LLC and will make our aviation business 14DAYPILOT Flight Academy based in Van Nuys California, even bigger.

In 5 years, we plan to go public in Indonesia.

Astronacci method works for any market and everyone will get benefit of it. My dream is helping all people make money easier with Astronacci Method.

MM : Where could our readers find you on social media? Which direction could you give them if they are your first-time followers?

GG : Instagram Gema :
@gemathebillionaire

Instagram Astronacci :

8 Tips on Trading Shares CFDs

What is CFD?

CFD is an acronym for contract-for-difference. It is a prevalent form of derivative trading. In a nutshell, CFD offers traders an opportunity to profit by merely speculating on price movement without owning the underlying asset.

If the market moves in the direction you predicted, you will profit from the price difference. But if the market goes against you, you will make a loss and the difference will be deducted from your trading account balance.

Difference between CFD trading and share trading

CFD trading is like share trading, but in CFD trading, you speculate on a market's price without taking ownership of the underlying asset. In contrast, when you trade shares, you need to take ownership of the underlying stocks.

In CFD trading, you are buying a contract between yourself and the party providing the CFD. This can be traded short or long, and you are not required to deliver the underlying asset in the event of a short sale.

Here are our 8 best tips for you:

1. Knowledge is power

Before you start trading, it is crucial that you understand what CFDs are and how they work. This includes knowing CFD trading basics as well as your particular instruments. Try to choose a market you have a good understanding of.

2. Practice

We know it can be hard to resist jumping straight into the real market and start trading. However, we recommend that you start your trading career with a demo account. Most importantly, it's a great way to test your trading tips free of charge before risking actual money.

Trading Tips

3. Limit your leverage

Always start small. There is always going to be a temptation to increase your position size when you are winning. It's not a good idea to leverage more than 3 times your account size, particularly as a beginner. As Paul Tudor Jones famously said, 'Don't focus on making money, focus on protecting what you have.'

4. Trading strategy

Find a strategy that will compliment your trading style and make sure it fits in with your risk tolerance and financial situation. Without an effective strategy, you might not see many benefits. Two popular CFD trading strategies:

Breakout Strategy

This involves identifying a key price level; you expect the price to break through and then buying or selling at that price, depending on the trend, to take advantage. Remember, with breakout trading, avoid any trades when the market isn't providing clear signals.

Contrarian Strategy

Contrarian trader sees what everyone else in the market is doing and promptly does the opposite. Timing is everything in this strategy. For example, if a share price has been on the decline, identify a point where you believe it's near the end of the trend. Then enter a buy position in anticipation of the trend turning in the other direction.

5. Set yourself stop losses

Use stop losses correctly and you'll be able to minimize your losses and help protect your capital. As William O'Neil rightly pointed out, "Letting losses run is the most serious mistake made by most investors."

6. Don't put all your eggs in one basket.

A straightforward way to lower your risk is "diversification." Today CFDs are available and are offered in a very diverse range of financial assets, so there's ample opportunity to diversify.

7. Cut Your Losses and Let Your Profits Run

You will find that it is easy to open positions and closing them is the hardest part. Some say to win in the trading game; you must learn to pull the trigger on losing trades. Never drop a stop loss to let it breathe more and never add more money to a losing trade in hopes of a quicker way to recover your losses.

8. Monitor your position

Even though you may have stops and limits in place, it is essential to review your positions on a regular basis frequently. This will help identify any issues or opportunities quickly and react and take action when necessary. It is also essential to make sure that you have sufficient margin maintained in order to keep your position open.
